**Task Manager with Running Unused Programs**

Task Manager after executing the Resource Allocation

Reflection on the Activity

The activity is all about the Resource Allocation and Management on Windows. The student was able to noticed the high usage of CPU, Memory, and Disk and it results to lagging, and slow response of certain application. The student was able to observe in the task Manager the high usage of noted and Microsoft edge since the both of them are automatically starting up whenever the computer opens up (Task Manager with Running Unused Programs). The student was able to follow the steps on how to terminate the unused applications and programs, the student was able to kill the process of the Microsoft edge and notepad (Task Manager after executing the Resource Allocation). This results with more efficiency in CPU usage and the computer was able to perform at a greater speed.
